**The flexibility, security and high scalability guaranteed by ODI allow us to face the differentiated and complex requirements we encounter in our business domain. ODI's potentialities make it an ideal work tool for the development of our data migration framework” –**  
Maurizio Bonzani, Senior Data Integrator, B-Source

### B-Source strengthens its data migration framework to support the transition of its clients to the new core banking system Avaloq

B-Source, a Swiss company, provides services for Business Process Outsourcing (BPO) to private and universal banks and IT Outsourcing (ITO) to the financial, insurance and other selected industries. Its clients include banks in Switzerland and a number of other countries. All services are ISO 9001 and ISO/IEC 27001:2005 certified and the company is SAS 70 Level II Audit Report compliant. B-Source works closely with its business partners the University of St. Gallen's Competence Center Sourcing, Avaloq and Orbium. B-Source's new BPO platform, the B-Source Master, is powered by Avaloq. Founded in 1995, B-Source has offices in Lugano, Basel, Lucerne, Nyon, St.Gall, Winterthur, Zurich and Munich. Its data centers are located in Lugano and Zurich. The current number of employees is about 580, half of which are banking professionals.

#### Challenges

- Manage in a standard and highly secure way a large number of migrations from different systems to Avaloq
- Respect highest data security standards
- Optimize enhancement and maintenance costs of the data migration framework
- Integrate and feed a dashboard for the verification and the control of the data migration processes

#### Solution

- Integration of Oracle Data Integrator into B-Source's development processes (Supported by Database & Technology S.R.L.)
- Oracle Data Integrator is the main tool for the development of the data migration framework
- Realization of the data interface with the data quality check applications (migration dashboard)
- Reduction of the development time and improvement of quick intervention capability thanks to customized, audit-specific reports
- Maximum control and effectiveness of the data transfer process supported by a user friendly graphical interface
- Solution can be applied to different databases thanks to its easy parameterization
- Solution can manage special PL/Sql developments (data enrichment) by means of the Oracle Data Integrator Scenarios
